PARTNERSHIPS HIGHLIGHT BEEF AS A HEALTHY CHOICE

SBDC, Midwest Dairy Council, and Ag United of SD provided a beef and dairy farm tour to approximately 46 foodservice professionals at the South Dakota Nutrition Association Conference. Producers shared their story and answered questions regarding modern production practices and food safety.

Nutting educators received checkoff funding toward the purchase of beef to enhance beef cooking and nutrition education in 39 South Dakota schools impacting 3,500 students.

Numerous medical and nutrition professionals received science-based, educational information through sponsorship of speakers and displays at seminars and conferences including: the American Heart Association, South Dakota Academy of Family Physicians, South Dakota Academy of Physicians Assistants, Sanford Black Hills Pediatric Symposium, and South Dakota Academy of Nutrition and Dietics.

A partnership with Ag United provided SD producers an opportunity to connect with consumers during the Rapid City Beef Crawl. This consistently sold-out event pairs consumers and producers to give first-hand information about local operations and how beef is raised.

CONSUMER CONNECTIONS

Regional consumers viewed beef educational cooking segments on Home Idea’s Kitchen Creations, television program produced and aired in Sioux Falls, while Eric Gantar demonstrates beef cookery on KOTA-TV in the Rapid City area.

2016 provided the 5th season of Taste of BEEF South Dakota. This past year we had more than 100 members of Run4Red across the state in endurance races ranging from 5ks to marathons. Each member, youth to adults, receives an official jersey to wear in events, and completes an orientation to educate them on the positive role beef plays in an athlete’s diet. The Team BEEF South Dakota Facebook page continues to be a strong strategy to share the beef message to more than 1 million Falls and Plaza is intended to provide “farm to table” interactive exhibits that utilize virtual reality and hands-on activities. This project will allow us to share the beef message to more than 1 million Falls Park visitors as well as provide a venue for multiple beef education engagement opportunities.

INTERNATIONAL MARKETING

SBDC partners with U.S. Meat Export Federation (USMEF) to sponsor activities around world which result in rising demand for U.S. beef. Rarely found on menus in the U.S., variety meat, offal or fancy meat takes many forms: kidneys, livers, stomachs, tendons, aorta, cheek meat, oktais and more. These beef items are highly prized for use in international cuisine. “The USMEF works to add value to beef. Not only to the high value cuts, but also the undervalued, underutilized cuts of beef in the domestic U.S. markets. Exports are very important for these variety meats. They have a minimal value in the U.S. but receive a much higher value in the export market.” - Mike Gebhart, USMEF Director, Meadow, SD.

FROM THE SBDC PRESIDENT

Challenging. Disturbing. Frustrating. All words I hear to describe the past year’s cattle market. Words which are often followed closely by the questions, “What is the beef checkoff doing?” and more pointedly, “How is my dollar spent?”

The United States Meat Export Federation (USMEF) is just one of the programs your checkoff dollars support. USMEF is the trade association responsible to develop international markets for the U.S. red meat industry. It is funded by USDA, the beef, pork, lamb, and soybean checkoff programs, and members from the nine industry sectors. Three South Dakota Beef Industry Council (SBDC) member directors also serve as USMEF directors. USMEF is headquartered in Denver with offices in Seoul, Tokyo, Beijing, Hong Kong, Shanghai, Singapore, Taipei, Moscow, St. Petersburg, Mexico City and Brussels. Major and local government representatives cover China, the Middle East, Central and South America, and the Caribbean. This extensive international presence means USMEF is active every day in vital markets around the world. As our high quality beef and pork take the lead in international markets, exports play a huge role. Not only in growth, but also prosperity for those of us in the cattle business.

Your checkoff also actively promotes promotion, research, industry relations, consumer information and producer communications.

While people rightfully ask how their dollar is spent, we take our role of investing your checkoff very seriously. An equally important question, “What would happen if we did not have the checkoff?” Who would we be without the checkoff? From the words I hear to describe our beef sector, I do believe challenging is the best way to describe our beef sector. Demand predictions indicate by 2050 our world will need to produce 60% more food. How it will be produced, and where and how it will be traded are questions we will have to answer. Sustainability, animal welfare, traceability, diseases, quality, and nutrition are a few hot topics. The questions will evolve into the future and is prepared to meet the challenges ahead. I encourage each of you to contact us with any concerns or questions.

Our long-standing partnership with the SBDC provides resources for NY state to reach more than the 101 million consumers in NY with meaningful programs that improve consumer confidence and promote beef in a healthy diet. A key part of all of the programs is to deliver the message that big or small, east or west, beef producers are committed to the care of their animals, the land and providing them with quality beef.” - Carol Gillis, New York Beef Council Executive Director.

RESEARCH

Beef checkoff-funded research includes studies at South Dakota State University to improve beef marbling, and quality and value of beef products. Techniques include feed management strategies that impact marbling development. Beef research scientists continued to investigate factors that contribute to Salmomella enterica persistence in cattle so more effective preharvest safety methods can be designed to minimize contamination of beef.

Dr. Kendra Kattelmann, SDSU Professor & Director, Didactic Program in Dietetics and graduate student Kristin Olsen utilized South Dakota checkoff dollars to conduct the study, “Let Them Eat Beef: Effects of Lean Beef Consumption on Markers of Metabolic Syndrome” Metabolic syndrome is the name for a group of risk factors that raises your risk for heart disease and other health problems, such as diabetes and stroke.

Their exemplary research and its proven findings in supporting beef as a nutritious and heart-healthy protein has received national acclaim by recently being published in the Functional Foods in Health and Disease Journal and an upcoming MED magazine.

YOUTH

As Ag Friday and Ag Day at the Washington Pavilions provided an opportunity to communicate the beef production story, share beef byproduct information and offered hands-on activities to approximately 1,000 youth and consumers. Teachers were provided lesson plans for classroom use.

When you load the truck bed with feed and turn on the ignition in your pickup, there’s a good chance you know your destination ahead of time. When you invest in your Beef Checkoff Program, that knowledge of destination is just as important.

The Beef Industry Long Range Plan 2016-2026 provides beef producers an important sense of direction and purpose. Its 2020 Strategic Objective — to increase the Beef Demand Index measure by 2 percent annually over the next five years — delivers a goal that allows industry leaders and the staffs of contracting organizations to measure their progress for the work they are doing. It also gives producers a key tool to help them determine how well their checkoff dollars are working to build demand for beef.

State beef council and national leaders are already working toward the goals it presents. The four areas you will read about now allow us focus to deal effectively with the myriad of issues with which we are faced as an industry. They are a thoughtful, serious effort to make sure our work as an industry has tangible results. As we struggle with limited budgets and increasing needs, this kind of focus is crucial. There’s no question that within our states we have varying priorities and different sets of needs. With an eye toward better management of checkoff dollars, though, our Beef Industry Long Range Plan is a way to get everyone headed toward the final destination.

Yours Truly,

Steve Hanson, Chairman
Federation of State Beef Councils

### DRIVE GROWTH IN BEEF EXPORTS

**Promote unique attributes of U.S. Beef in foreign markets.**

Example: With the support of the Beef Checkoff Program, the U.S. beef industry is finding exciting new opportunities in Japan, one of the most important export markets for its products. In fact, the popularity of U.S. beef in Japan is well-illustrated in the 2016 beef export results. June exports to Japan were the largest in nearly two years, up nearly 30 percent year-over-year. January-June exports climbed 12 percent in volume and 5 percent in value. Japan's import data also show a strong rebound in market share for U.S. beef at 38.5 percent – up from 33 percent year-over-year. January-June exports climbed 12 percent in volume and 5 percent in value. Japan's import data also show a strong rebound in market share for U.S. beef at 38.5 percent – up from 33 percent in the first half of 2015.

### PROTECT AND ENHANCE THE BUSINESS AND POLITICAL CLIMATE FOR BEEF

**Develop crisis management plans and attract, develop and enable the next generation.**

Example: The beef industry faces many issues not of its own making that could have a negative impact on beef producers and their livelihoods. Playing good defense in cases where bad publicity might impact our industry has been recognized as a crucial element of the Beef Checkoff Program.

In the fall of 2015 the World Health Organization’s International Agency for Research on Cancer issued a report that identified red meat as “probably carcinogenic to humans,” and processed meats as “carcinogenic to humans.” Sensational headlines naturally followed, and significant media exposure assured it would be one of the biggest news days in red meat history. What could have turned out negative ended up balanced, however, thanks partly to experienced preparation and management of the issue by the beef checkoff.

Through spokesperson appearances, releases, fact sheets and many other forms of outreach, the industry responded, and these checkoff-funded efforts were combined with consumer reactions and skepticism that resulted in a stunning occurrence — the WHO clarified its position by saying “the latest IARC review does not ask people to stop eating processed meats” and that it was a “shortcoming” of IARC’s classification process that led to its original report.

The efforts did not go unnoticed in the agricultural community. In recognition of the beef industry’s checkoff-funded work, the Agricultural Relations Council presented the beef checkoff top honors in the Golden ARC Awards, including first place in the issues Management category and the Golden ARC of Excellence, the organization’s highest honor recognizing excellence in agricultural public relations.

### PROMOTE AND STRENGTHEN BEEF’S VALUE PROPOSITION

**Revolutionize beef marketing and merchandising, research and communicate beef’s nutritional benefits, and connect and communicate directly with consumers.**

Example: Beef isn’t just for lunch and dinner anymore. And the beef industry has research to back up that statement.

Research conducted by Heather Leidy, Ph.D., at the University of Missouri found that daily consumption of a high-protein breakfast that included two eggs and 15 ounces of beef was superior to both a normal protein breakfast featuring milk and cereal or skipping breakfast altogether, in terms of improving appetite control, curbing food cravings and reducing unhealthy snacking in overweight or obese teenage girls who routinely skip their breakfast meal.

The research was featured in both the American Journal of Clinical Nutrition and the Nutrition Journal.

“Protein at breakfast appears to be a good target to increase protein intake,” Leidy says. “A high-protein breakfast seems to reduce food craving-based neural signals, and improve overall diet quality.” Other research funded through the Beef Checkoff Program verifies the benefit of balancing protein intake throughout the day.

This kind of independent research helps the industry promote healthy diets and optimal protein intake and is used in promotions, such as the checkoff-funded 30-Day-Protein Challenge provides sound scientific support for programs that encourage consumers to include beef in their meals throughout the day. Thousands of consumers have become active in the Challenge, thanks to both state beef council and national efforts to promote it.

### GROW CONSUMER TRUST IN BEEF AND BEEF PRODUCTION

**Ensure beef safety, protect beef’s image and engage beef advocates.**

Example: The checkoff-backed Beef Quality Assurance program delivers to producers a set of best practices for generating quality beef it does this by supporting practices that focus on good record keeping and protecting herd health, all the way from raising and feeding through transportation, for both traditional beef and dairy operations.

BQA manuals provide straightforward information to U.S. beef producers and a framework for national consistency. At the same time, BQA is state-administered, allowing individual states to determine the best programs that will meet the needs of that state’s producers.

The BQA program also gives consumers positive assurances about the beef they eat. It delivers a positive message about the common sense husbandry techniques, founded on accepted scientific knowledge, used in cattle raising today, and reinforces a message about the already strong safety and wholesomeness of the U.S. beef supply. The premise of the program is that when better quality cows leave the farm and reach the marketplace, the producer, packer and consumer all benefit.

BQA is a widely accepted and broadly adopted routine throughout the beef industry. It’s estimated that 90 percent of the fed cattle being raised for beef are produced under BQA management practices. Throughout the past, year BQA has worked to grow its resources and tools for beef producers, including revisions and updates of the Feedyard Assessment and a partnership with the dairy industry on the widely accepted Farmers Assuring Responsible Beeef (FARM) program. The updated Feedyard Assessment, originally developed in 2009, brings the industry accepted-document up-to-date and draws producers’ attention to industry topics of importance, including antibiotic stewardship practices. By partnering with FARM the BQA program will now be able to deliver to dairies throughout the United States important husbandry techniques that can improve the quality of beef coming from the dairy sector.
